

## Steep Hill Proficiency Results: The Emerald Test

November 9, 2014 - In preparation for our upcoming ISO 17025 certification, our Oakland and Seattle labs participated in a D9THC potency ring test conducted by Emerald Scientific with 17 other labs around the nation. Steep Hill is pleased to report that we did very well, testing within +/- 1%. We work hard to maintain accurate, consistent results across each of our testing facilities, and are proud to display the Emerald Scientific certification badges.

### The Emerald Test

The D9THC proficiency test evaluates a lab's proficiency at cannabinoid potency testing. Each test includes a single, unknown Delta-9 THC sample in methanol, between 100-1000ug/ml. The test is ISO 17043 accredited. Samples are shipped overnight to participating labs, who then have 7 days to run the sample and report results.
